

## CANVASSING RESEARCH

**Definition:** Visiting voters at their homes to talk to them about voting.

**Bottom Line:** Canvassing is the most effective form of voter contact because of the opportunity for face-to-face communication.

### CONSIDERATIONS

**Pros** - Best way to talk to voters (face to face); most evidence it works compared to other field tactics

**Cons** - Time consuming; must be done in person; harder to do in rural or exurban areas

### RESEARCH FINDINGS

#### Canvassing reliably increases turnout.

- Academics (Green & Gerber) report that canvassing increased voter turnout in 44 out of 51 studies they reviewed.<sup>1</sup>
- Academics (Green, Gerber, and Nickerson) ran 6 GOTV canvassing experiments before the 2001 municipal elections and found increases in turnout among canvassed voters ranging from 0.1%-4.6% with an average effect of 2.1%.<sup>2</sup>
- Canvassing effects vary widely due to differences in election types, election competitiveness, canvass timing, canvass training and quality, contact rate, etc.<sup>2</sup>
- Academics (Nickerson) found a 16.8% increase in turnout for the 2002 Michigan Gubernatorial election (but the standard error was 15, indicating a lot of uncertainty about that estimated increase).<sup>3</sup>

#### Canvassing can be a good voter registration tool.

- Academics (Nickerson) found an increase in registration of 4.4% across 6 experiments in a variety of election year types (i.e., president, congressional, municipal).<sup>4</sup>

**Canvassing is the most effective volunteer tactic out of the major 4 (canvassing, phonebanking, textbanking, handwritten postcarding/letter-writing; Industry source).<sup>5</sup>**

## CANVASSING RESEARCH

### Areas for future exploration:

- Effectiveness of canvassing in combination with other voter contact tactics, such as text messaging.
- Completed/planned SDAN studies:
  - 2019 phonebank/canvass postcard chaser pilot study (MS/LA - results expected summer 2020)
  - 2020 Phonebank/canvass postcard chaser study (TX)
